Gemstone Buying Guide:

Buying a gemstone is an exciting investment, but knowing what to look for can help you choose a genuine, high-quality stone with confidence. Use this simple guide before making your purchase.

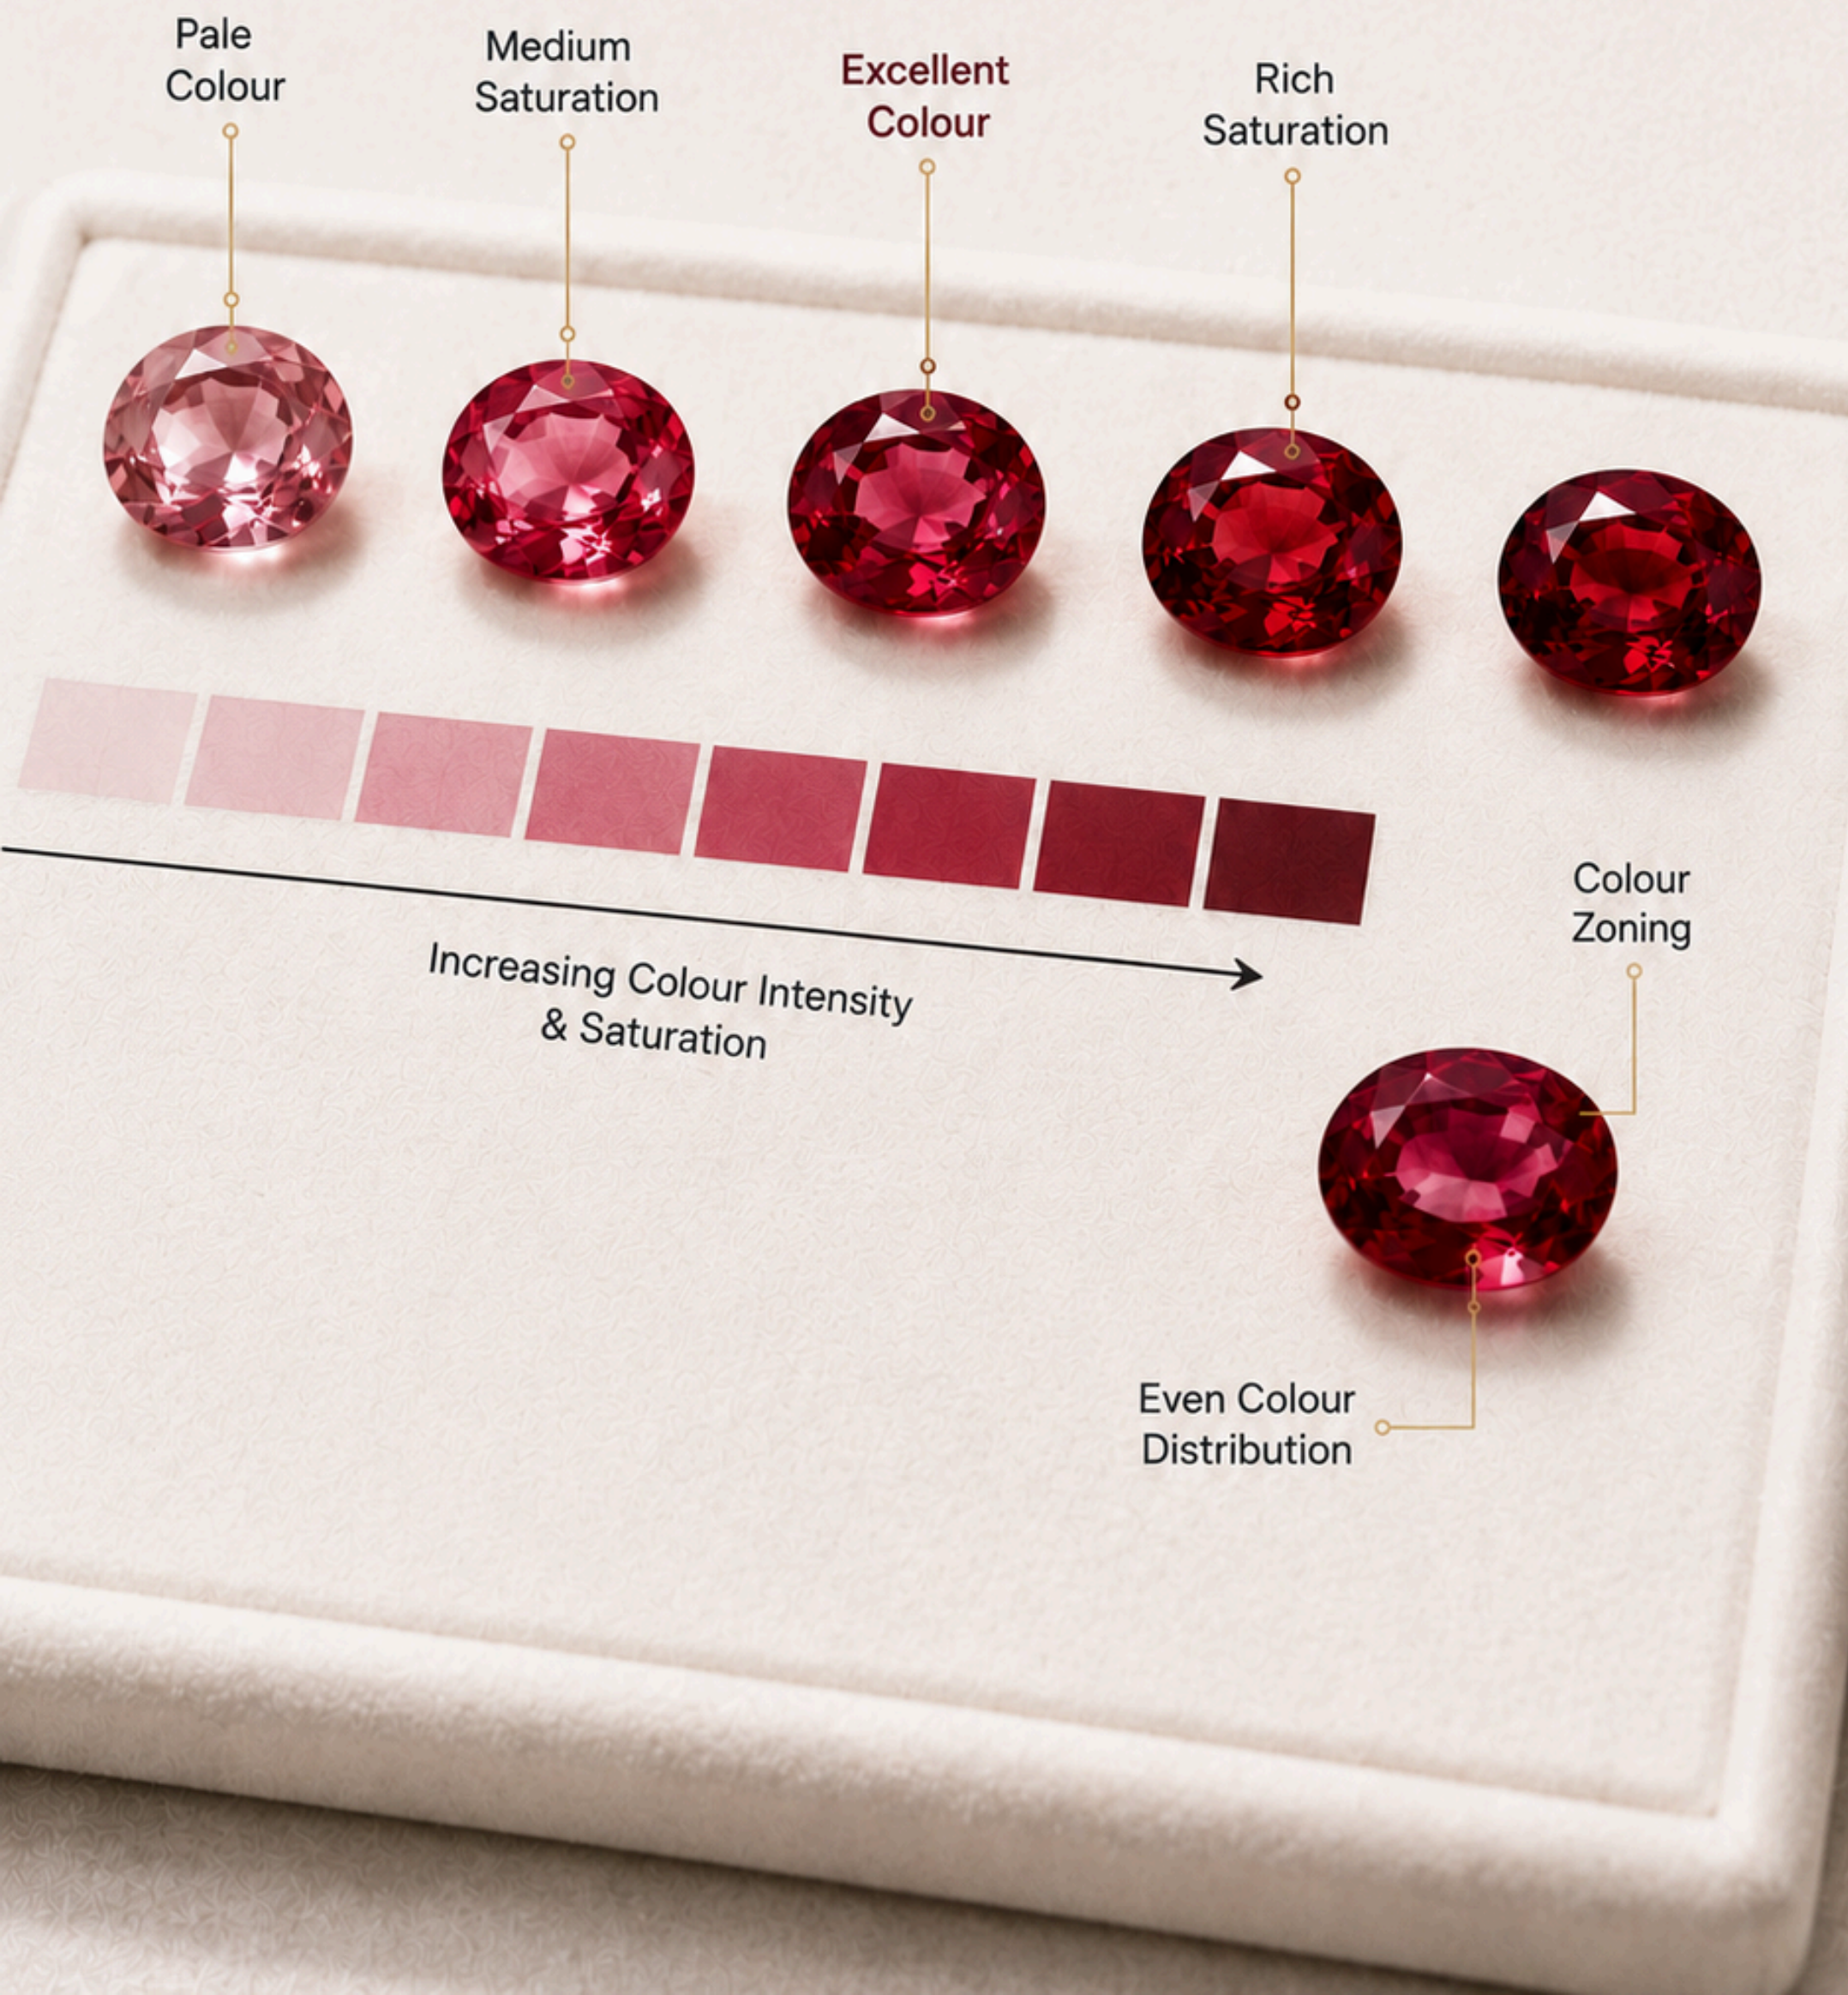

1. Confirm the Gemstone Type

Ensure you know exactly which gemstone you are buying and whether it is natural, laboratory-grown, or an imitation. Always ask the seller for complete disclosure.

2. Check the Colour

Colour is one of the most important quality factors. Look for a vibrant, even colour with good saturation and minimal colour zoning.

3. Inspect Clarity

Natural gemstones often contain inclusions, but they should not significantly affect the stone's beauty or durability. Avoid gemstones with obvious cracks or fractures.

Natural Inclusion ✓

Feather Inclusion

Crystal Inclusion

Surface Fracture ✗

Eye-Clean Appearance

Crack

4. Assess the Cut

A well-cut gemstone should have good symmetry, proper proportions, and an attractive appearance. A poor cut can reduce the gemstone's overall beauty.

5. Consider Carat Weight

A larger gemstone is generally rarer, but size should never be the only deciding factor. A smaller gemstone with better colour and clarity is often more valuable than a larger, lower-quality one.

Better Colour ✓
Better Clarity ✓
Higher Brilliance ✓

Higher Carat

Larger Doesn't
Always Mean Better
